

CODE :-

```
import numpy as np
def mcculloch(x1,x2):
    w1=1
    w2=-1
    theta=1
    output=[]
    for i in range(len(x1)):
        w=np.dot([w1,w2],[x1[i],x2[i]])
        output.append(1 if w>=theta else output.append(0)
    return output

n = int(input("How many values do you want to enter? "))
x1 = []
x2 = []

print("Enter values for x1:")
for i in range(n):
    a = int(input("Enter a number: "))
    x1.append(a)

print("Enter values for x2:")
for i in range(n):
    b = int(input("Enter a number: "))
    x2.append(b)

output = mcculloch(x1, x2)
print("Neuron output:")
print("\nX1 X2 Y")
print("-----")
for i in range(n):
    print(x1[i], " ", x2[i], " ", output[i])
```

OUTPUT :-

How many values do you want to enter? 4

Enter values for x1:
Enter a number: 0
Enter a number: 0
Enter a number: 1
Enter a number: 1

Enter values for x2:
Enter a number: 0

Enter a number: 1

Enter a number: 0

Enter a number: 1

Neuron output:

X1 X2 Y

0 0 0

0 1 0

1 0 1

1 1 0
